CADY™ Compute Accelerator

Upgrade Existing Data Centers. Don't Build New Ones.

Intelligence Where Performance Matters.

A Practical Solution for Today's Infrastructure

The world's demand for computing power continues to accelerate while organizations face increasing challenges in expanding existing data center capacity. New facilities often require significant capital investment, additional electrical infrastructure, lengthy permitting processes, extended construction timelines, and increasing community concerns surrounding large-scale AI data center development.

The CADY™ Compute Accelerator was created to address a different opportunity.

Rather than replacing existing infrastructure or waiting years to build new facilities, our mission is to help organizations improve the performance and value of the data centers they already own. By integrating intelligent hardware acceleration into existing compute environments, organizations can evaluate opportunities to increase infrastructure performance, improve operational efficiency, extend infrastructure life, and delay or reduce the need for costly infrastructure expansion.

The future of computing is not simply building more infrastructure. It is making today's infrastructure significantly more intelligent.

Why Existing Data Centers?

- Existing infrastructure investment
- Power availability
- Permitting delays
- Community resistance
- Construction timelines
- Faster modernization
- Lower capital requirements

CADY™ Direct Pilot Partner Program

Limited to five strategic organizations. Offered directly through CADY™, ICH and WeSave. This is not a general commercial release. It is a collaborative validation program providing early access, operational reporting, product feedback, and engineering collaboration.

What the Direct Pilot Program Includes

Offering	Direct Pilot Program	Future Commercial Progra
CADY™ Compute Accelerator	Starting at $50,000	$150,000 MSRP
CADY™ Platform Subscription	$200/month	$500/month MSRP

- One CADY™ Compute Accelerator integrated into one existing compute/server station
- Engineering collaboration

• Installation support
• Performance benchmarking
• Operational reporting
• Product feedback
• Joint review

Platform Highlights

Current Pilot Platform
• High-performance FPGA accelerator architecture
• Approximately 2.6 million FPGA logic units
• Designed for AI inference acceleration
• Ultra-high inference throughput
• Existing server integration
• Continuous optimization during pilot

Additional benchmark metrics will be published following pilot validation.

Why Become a Direct Pilot Partner?

• Preferred Direct Pilot Partner Pricing
• Early access to the CADY™ Compute Accelerator
• Engineering collaboration
• Executive collaboration
• Existing infrastructure validation
• Product feedback
• Future implementation opportunities
• Future reseller consideration

Commercial Roadmap

Direct Pilot Program → Performance Validation → Commercial Launch → Regional Integrators → Distribution Partners → Enterprise Deployment

Confidentiality & Intellectual Property

All Direct Pilot Partners will execute Confidentiality, Intellectual Property, and Pilot Evaluation Agreements prior to deployment.

Apply for Consideration
