

BTC MA Strategy — The 12 Questions

Ten minutes, short answers, bullet points fine. Where no rule exists and you just read the chart, write "gut" — that answer is genuinely more useful than a made-up rule. Everything else (trade-by-trade log, fees, statistics) gets pulled from the exchange export in Q12 — you don't have to compile anything.

The essentials

1. **What do you trade and where?** (spot or perps, which exchange, typical leverage)

.....

2. **Which moving averages?** Type (EMA/SMA) and length, per timeframe. Example: "1h: 21+50 EMA · 4h: 200 EMA · 1d: 50+200 SMA · 1w: 20 SMA"

.....

3. **Which chart do you actually pull the trigger on?** (1h? 4h? 15m?)

.....

4. **When do you enter?** A sentence or two per entry type — e.g. "price dips to the 4h 200 EMA and prints a rejection wick, I buy the reclaim" / "1h closes above the 50 EMA after sitting under it, I buy the breakout." Wick touch or candle close?

.....

5. **Where is your stop?** (X% under the MA? under the swing low? mental? none?)

.....

6. **When do you take profit?** (next MA up? fixed %? R multiple? "when it feels done"?)

.....

7. **How big is a typical trade,** and roughly what % of your stack is at risk if the stop hits?

.....

8. **Long only, or shorts too?** If shorts: same rules mirrored, or different?

.....

9. **Out of 10 trades, how many follow the above exactly** — and how many are chart-feel / gut?
___ / 10

.....

10. **What else do you look at** that isn't in Q2–Q6? (funding, order book, volume, news, time of day, "the way the candle looks"...) List everything, even the fuzzy stuff.

11. **How long have you traded this, roughly what's it made net, and what was the worst losing streak?**

12. **Export your trade history from the exchange** (every exchange has this — Orders/Trade History → Export CSV, full date range, all trades including losers). Just attach the raw file — no cleaning needed.

Bonus round — only if you're feeling generous

Skippable. Each one sharpens the replay but none blocks it.

- Setups that look valid by your rules but you skip anyway — what makes you skip?
- Partial exits or trailing stops — how?
- Max positions on at once / when do you size up or down?
- Did the rules change along the way? Roughly when?
- A few chart screenshots of trades you considered textbook.

What happens next: the answers become code, the code replays your period of history, and we measure whether the coded rules reproduce your trades and your P&L. High match → it's automatable. Low match → the edge is you, not the rules — also worth knowing. Either way you never fill out a form again.
